*Offer limited or first time buyers

Gain relevant time visibility into the health of your steam traps anytime, anywhere with the Rosemount 708 Wireless Acoustic Transmitter and Steam Trap Insight software.

The new software application provides relevant time status analytics including failure modes ("inactive", "blow through", "plugged" and "flooded"). The visual dashboard provides instant insight into steam trap health, emissions loss and energy usage.

The enhanced algorithm provides improved failure analysis and stability enabling better decisions, faster reaction and business impact notifications. You will eliminate the need for manual inspections and can proactively prioritize maintenance saving both time and costs.
